IDEATION PHASE

Brainstorm & Idea Prioritization Template

Project Detail	Information
Date	29 October 2026
Team ID / Enrollment No.	EN25CS3010450
Project Name	Global Fuel Prices and Taxation Trends
Maximum Marks	4 Marks
Student	Joyal Sengar (Individual Project)

Brainstorm & Idea Prioritization Template:

Brainstorming helps identify different analytical directions before selecting the most useful and practical ideas. For this individual Tableau project, the ideas below are based on the available global fuel dataset, which includes country, region, date, petrol/diesel/LPG prices, Brent crude price, tax percentage, income level and subsidy level.

Step 1: Brainstorm and Idea Listing

List possible analytical ideas before prioritizing which views are most useful for the final dashboard.

S. No.	Team Member	Idea / Suggestion	Category	Group No.
1	Joyal Sengar	Create an overview of average petrol, diesel and LPG prices, with KPI cards to summarize the main fuel-price measures.	Fuel Price Overview	1
2	Joyal Sengar	Compare average petrol and diesel prices across countries and global regions to identify differences and higher/lower price groups.	Country & Regional Comparison	2
3	Joyal Sengar	Explore the relationship between fuel prices and tax percentage using comparisons and a suitable chart, where both measures are available.	Taxation Analysis	3
4	Joyal Sengar	Analyze fuel-price patterns over time alongside Brent crude prices to identify broad trends in the available date range.	Time-Series Trends	4
5	Joyal Sengar	Compare average fuel prices and tax percentages by income level and subsidy level to explore differences between categories.	Income & Subsidy Analysis	5
6	Joyal Sengar	Build a heatmap of tax percentage by region and income level to make category-level differences easier to compare.	Tax Distribution	3

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the ideas that contribute most to the final Tableau dashboard.

Group No.	Final Idea	Feasibility	Importance	Priority	Selected
1	Fuel-price overview with KPI cards for petrol, diesel and LPG measures.	High	High	1	Yes
2	Country and regional comparison of petrol and diesel prices.	High	High	2	Yes
3	Taxation analysis using tax percentage comparisons and a region/income-level heatmap.	High	High	3	Yes
4	Time-based comparison of fuel prices and Brent crude price.	Medium	High	4	Yes
5	Comparison of fuel prices by income and subsidy categories.	High	High	5	Yes

Selected project direction: Develop a Tableau dashboard and story that summarize global fuel prices, compare regional differences, and explore how taxation, income level and subsidy level relate to observed fuel-price patterns.

Note: The ideas are tailored to the supplied project dataset and workbook. This is an individual project, so the same student is listed for each brainstormed idea.
