Project Name	Global Fuel Prices and Taxation Trends
Maximum Marks	5 Marks

An effective dashboard presents complex information in a clear, relevant, and accessible way. This Tableau dashboard brings together global fuel-price patterns and taxation indicators for 2020–2026. It is designed to help users explore differences across regions, countries, income groups, and subsidy levels, while also examining price movement and volatility.

Activity 1: Interactive and Visually Appealing Dashboard

The dashboard combines nine visual analyses with interactive filters for Region, Income Level, Country, Subsidy Level, and Average Tax Percentage. The filters allow users to narrow the view and compare selected groups without losing the overall context.

- **Clear and Intuitive Layout:** The dashboard is arranged into related sections, with filters placed at the top and charts grouped by topic.
- **Appropriate Visualizations:** Maps, trend lines, bar charts, heatmaps, tables, and scatter plots are used to communicate different types of comparisons.
- **Colour and Theming:** A consistent palette distinguishes income and subsidy categories and helps highlight differences in fuel prices and volatility.
- **Interactive Filters and Slicers:** Region, income level, country, subsidy level, and tax percentage controls support focused exploration.
- **Comparative Analysis:** The views compare fuel prices across countries and income levels, and relate petrol prices to subsidy and tax indicators.
- **Geographical Exploration:** A country-level diesel price map and a regional volatility chart provide a spatial perspective.
- **Trend and Forecast View:** The 2020–2026 fuel-price trend includes a 12-month forecast to support examination of possible future movement.
- **Readable Labels and Legends:** Chart titles, axes, legends, and displayed values help users interpret the measures shown.

Dashboard Components

The dashboard contains the following nine visualizations:

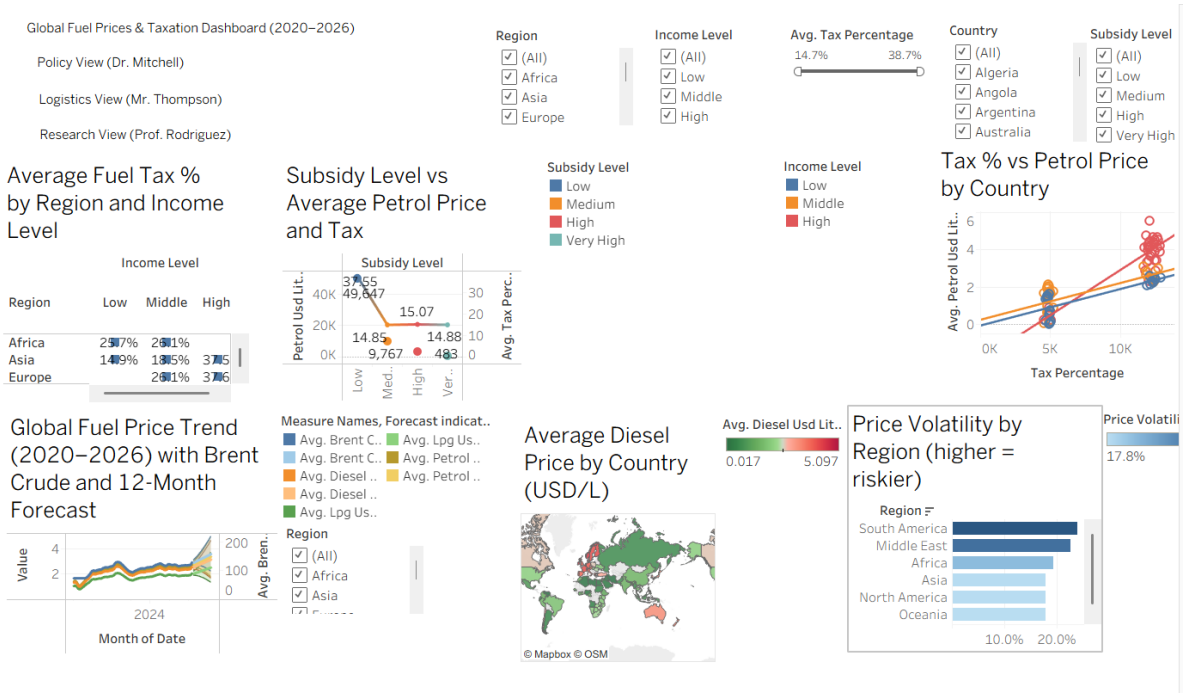

- 1. Average Fuel Tax % by Region and Income Level
- 2. Subsidy Level vs Average Petrol Price and Tax
- 3. Tax % vs Petrol Price by Country
- 4. Global Fuel Price Trend (2020–2026) with Brent Crude and 12-Month Forecast
- 5. Average Diesel Price by Country

- 6. Price Volatility by Region
- 7. Average Fuel Price by Income Level
- 8. Petrol Price by Income and Subsidy Level
- 9. Brent Crude vs Diesel Price by Income Group

Major Outcomes from the Dashboard

- **Regional taxation:** The tax heatmap compares average fuel-tax percentages across regions and income levels, making regional differences visible.
- **Subsidy comparison:** The subsidy analysis compares average petrol price and tax across Low, Medium, High, and Very High subsidy categories.

- **Country-level relationship:** The tax-percentage versus petrol-price scatter plot allows country-level comparison of the two measures.
- **Price movement:** The time-series view presents global fuel-price movement from 2020 to 2026 alongside Brent crude and a 12-month forecast.
- **Geographical price pattern:** The diesel-price map provides a country-wise view of average diesel prices.
- **Regional risk:** The volatility chart ranks regions by price volatility; South America and the Middle East appear among the highest bars in the displayed view.
- **Income and subsidy patterns:** Bar and heatmap views compare average fuel prices across income groups and subsidy levels.
- **Crude-oil relationship:** The Brent crude comparison visualizes the relationship between average Brent crude and diesel prices across income groups.

Note: The outcomes above describe patterns visible in the supplied dashboard screenshots. They do not claim statistical causation beyond what the visualizations display.

Activity 2: Publish Dashboard on Tableau Public

Public dashboard link

The completed Global Fuel Prices and Taxation Trends dashboard is published on Tableau Public. Use the link below to open the interactive visualization.

Project Summary

This project uses Tableau to explore global fuel prices and taxation trends from 2020 to 2026. By combining geographical, temporal, and comparative visualizations with interactive filters, the dashboard provides a consolidated view of how fuel prices vary across countries, regions, income levels, and subsidy categories. It also places fuel-price patterns alongside tax measures, regional volatility, and Brent crude prices.
