CUSTOMER JOURNEY MAP

Project detail	Information
Date	29 October 2026
Team ID / Enrollment No.	EN25CS3010450
Project Name	Global Fuel Prices and Taxation Trends
Maximum Marks	2 Marks

Customer Journey Map

Map the user's experience stage by stage, including actions, touchpoints, thoughts, feelings, process ownership and improvement opportunities. The journey below is adapted to the global fuel prices and taxation Tableau project.

Journey phase	Stage 1 Explore & Discover	Stage 2 Analyze & Compare	Stage 3 Decide & Communicate
Actions **What does the user do?**	• Opens the global fuel dashboard • Reviews headline fuel-price measures • Scans petrol, diesel and LPG prices by region	• Compares prices across regions and countries • Reviews tax percentages by region and income level • Checks time trends and category differences	• Summarizes the main observed patterns • Selects key regional and category comparisons • Shares or exports the dashboard/story for discussion
Touchpoints **What part of the service do they interact with?**	• KPI cards for fuel-price measures • Regional price comparison charts • Dashboard filters for date, region or fuel type, if available	• Country and regional comparison worksheets • Tax-percentage heatmap or comparison view • Time-based charts and income/subsidy comparisons	• Tableau dashboard and story • Regional averages and tax comparisons • Export/share options available in Tableau
Customer thought **What is the user thinking?**	• “Which regions have the highest and lowest fuel prices?” • “Are petrol, diesel and LPG patterns similar?” • “Can I trust the data and units?”	• “How do tax percentages differ across categories?” • “Do tax and price appear related?” • “What changes over time?”	• “What are the strongest findings in this dataset?” • “Which comparisons support my conclusion?” • “Can I explain the limitations clearly?”
Customer feeling **What is the user feeling?**	Curious, but potentially overwhelmed by many countries, dates and measures.	Engaged and focused when comparisons are clear; cautious when definitions or unusual values are uncertain.	More confident when findings are supported by clear visuals; cautious about treating association as causation.
Process ownership **Who leads this stage?**	The analyst / dashboard user explores the Tableau views; the project creator is responsible for clear labels and data notes.	The analyst interprets the views; the project creator maintains consistent measures, filters and chart labels.	The project author prepares the summary and explains results; decision-makers use the analysis as supporting evidence.
Opportunities **How can this stage improve?**	• Add concise KPI definitions and units • Make filters easy to find • Highlight the highest and lowest values clearly	• Keep units and date ranges consistent • Flag unusual low price values for validation • Use linked filters and informative tooltips where available	• Add annotated key takeaways • Include the period and measure in each conclusion • State data limitations and avoid causal claims without evidence

Note: This map represents a plausible user journey for an analyst using the project dashboard. It is based on the dataset and project scope, not on formal user interviews. Only list filters, charts or export features that are actually present in your final Tableau workbook.
