2. User Stories

The user stories describe the analytical needs, expected value and acceptance criteria for the Tableau project. Priorities and releases are suggested planning labels for this individual project.

User Type	Functional Requirement (Epic)	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Energy / Policy Analyst	Fuel Price Overview	USN-1	As an energy or policy analyst, I want to view average petrol, diesel and LPG prices, so that I can understand the overall fuel-price profile in the dataset.	The overview displays the selected fuel-price measures with clear units and labels.	High	Sprint-1
Regional Analyst	Regional Comparison	USN-2	As a regional analyst, I want to compare fuel prices across regions and countries, so that I can identify differences between locations.	The comparison view allows fuel prices to be compared by region/country using consistent measures.	High	Sprint-1
Tax Researcher	Taxation Analysis	USN-3	As a tax researcher, I want to compare tax percentages across regions and income levels, so that I can identify category-level patterns.	Tax percentages are displayed by the chosen region and income categories with readable labels.	High	Sprint-1
Energy Market Analyst	Time-Series Trends	USN-4	As an energy market analyst, I want to explore fuel prices and the available Brent crude price measure over time, so that I can inspect broad temporal patterns.	The time-based view uses the date field and clearly labels the measures shown.	Medium	Sprint-2
Policy Researcher	Income & Subsidy Analysis	USN-5	As a policy researcher, I want to compare fuel prices across income and subsidy levels, so that I can explore differences between categories.	The view supports comparisons across the available income and subsidy groups without implying causation.	High	Sprint-2
Dashboard User	Dashboard Interaction	USN-6	As a dashboard user, I want to explore the available Tableau views and filters, so that I can focus on the region, category or period relevant to my question.	Any filters listed in the final workbook update the relevant views correctly; unavailable filters are not claimed.	Medium	Sprint-2
Project Reviewer	Data Quality & Interpretation	USN-7	As a project reviewer, I want the report to explain data-quality checks and limitations, so that I can judge how confidently the results should be interpreted.	Documentation states the date coverage, cleaning checks, unusual values and the limits of correlation-based interpretation.	High	Sprint-1
Dashboard Maintainer	Data Management	USN-8	As a dashboard maintainer, I want to reopen the packaged Tableau workbook with its connected dataset, so that the worksheets, dashboard and story remain available for review.	The workbook opens without missing-data-source errors and its worksheets, dashboard and story can be accessed.	High	Sprint-1

Note: Stories are tailored to the available fuel dataset and Tableau project. Confirm the final filters, chart names and interactions against the submitted workbook.
